

PROFESSIONAL DEVELOPMENT PROGRAMME

AI & Technology Integration for English Language Teachers

A Six-Week Programme

6 Sessions • 2 Hours Per Session • Entry Level

Core Programme Areas

Prompt Engineering for Pedagogy • AI Teaching Assistants
Technology-Enhanced Assessment & Feedback • Activity Design with Technology

Programme Overview

This six-week professional development programme is designed to introduce English language teachers to the transformative potential of artificial intelligence and technology in modern pedagogy. Participants will move progressively from foundational AI literacy to confident, practical application of AI tools across lesson planning, classroom instruction, assessment, and activity design.

The programme is designed for entry-level technology users. No prior experience with AI tools is required. Each two-hour session builds on the previous one, creating a structured learning journey that culminates in a professional portfolio of AI-enhanced teaching materials and a personalised action plan for ongoing implementation.

Duration	Format	Sessions	Level
6 Weeks	1 Session / Week	2 Hours Each	Entry Level

Programme Goals

The overarching goals of this programme are:

- To build foundational AI literacy among English language teachers, enabling them to understand, evaluate, and critically engage with AI tools in an educational context.
- To equip teachers with practical, classroom-ready skills in prompt engineering, AI-assisted lesson planning, and technology-enhanced assessment.
- To foster a reflective, ethical, and pedagogically grounded approach to integrating AI and technology into English language teaching.
- To empower teachers to design and implement engaging, technology-enhanced learning activities that promote authentic language use and higher-order thinking.
- To support teachers in developing a sustainable, personalised professional practice with AI tools that evolves beyond this programme.

Programme Objectives

By the end of this six-week programme, participants will be able to:

Knowledge Objectives

- Define key AI concepts (machine learning, natural language processing, generative AI) and explain their relevance to English language teaching.
- Identify a range of AI tools available for teachers and articulate the strengths and limitations of each.
- Explain the principles of effective prompt engineering and apply them to pedagogical contexts.
- Describe ethical considerations related to AI use in education, including issues of bias, privacy, and academic integrity.

Skills Objectives

- Write clear, effective, and pedagogically purposeful prompts to generate lesson materials, feedback, and assessments using AI tools.
- Use AI as a teaching assistant to plan lessons, differentiate instruction, and create tailored content for diverse learners.
- Design formative and summative assessment tasks and generate personalised student feedback using technology.
- Create technology-enhanced learning activities that align with curriculum objectives and promote critical thinking and authentic language use.

Attitudinal Objectives

- Develop confidence in using AI and digital tools as professional resources rather than sources of anxiety or avoidance.
- Adopt a reflective and critical stance toward AI-generated content, consistently applying professional judgment.
- Demonstrate a commitment to ethical, equitable, and responsible AI use in the classroom.

Programme Outcomes

Upon successful completion of this programme, participants will have achieved the following outcomes:

Outcome Area	Description
AI Literacy	Participants will have a working knowledge of AI technology, its capabilities, limitations, and implications for English language education.
Practical Competence	Participants will leave with a portfolio of AI-enhanced lesson plans, assessment tools, rubrics, and learning activities ready for immediate classroom use.
Prompt Engineering	Participants will have built a personal Prompt Bank containing professionally crafted prompts for a range of English teaching purposes and proficiency levels.
Assessment Skills	Participants will be able to use technology tools to design assessments, generate rubrics, and provide timely, personalised written feedback to students.
Activity Design	Participants will have designed at least two fully developed, technology-enhanced English language activities aligned to Bloom's Taxonomy.
Professional Growth	Participants will have completed a personalised Professional Action Plan outlining how they will continue integrating AI and technology into their teaching practice.

Instructional Design Framework

The table below outlines how each session of the programme will be delivered and experienced by participants. The instructional design draws on a blend of evidence-based pedagogical approaches including experiential learning, project-based learning, and reflective practice. Each session is structured to move from teacher input and modelling to guided practice and independent application.

Week	Teaching Method	Delivery Mode	Learning Strategy	Technology Tools	Assessment Type
Week 1	Direct Instruction + Guided Exploration	Face-to-face / Blended	Experiential Learning	ChatGPT, Claude, Gemini	Reflective Journal
Week 2	Modelling + Collaborative	Face-to-face / Blended	Problem-Based	ChatGPT, Prompt	Prompt Bank

Week	Teaching Method	Delivery Mode	Learning Strategy	Technology Tools	Assessment Type
	Practice		Learning	templates	
Week 3	Workshop + Peer Collaboration	Face-to-face / Blended	Project-Based Learning	AI lesson planners, LMS tools	Lesson Plan
Week 4	Demonstration + Critical Analysis	Face-to-face / Blended	Inquiry-Based Learning	Quizlet AI, Kahoot, ChatGPT	Rubric + Feedback
Week 5	Design Thinking + Studio Practice	Face-to-face / Blended	Constructivist Learning	Padlet, Nearpod, Canva	Activity Portfolio
Week 6	Showcase + Reflective Practice	Face-to-face / Blended	Self-Regulated Learning	Personal AI Toolkit	Action Plan

Weekly Session Breakdown

WEEK 01	Introduction to AI & Its Role in Education
Learning Objectives	1. Define artificial intelligence and distinguish key AI concepts relevant to education 2. Identify major AI tools available for English language teachers 3. Reflect on personal readiness and attitudes toward AI integration 4. Explore ethical considerations of AI in educational settings
Content Covered	• What is AI? Core concepts demystified (machine learning, NLP, generative AI) • Overview of AI tools: ChatGPT, Claude, Gemini, Grammarly, and more • AI in education: global trends and research insights • Ethical considerations: bias, privacy, academic integrity • Hands-on exploration: creating your first AI account and interface tour
Activities	• Ice-breaker: AI myth vs. fact quiz • Live demo: interacting with an AI chatbot for the first time • Group discussion: opportunities and concerns • Reflection journal: 'My first impression of AI'
Assessment	Reflection journal entry (ungraded)

WEEK 02	Prompt Engineering for English Language Pedagogy
Learning Objectives	1. Understand what prompt engineering is and why it matters for teachers 2. Apply the CLEAR framework to write effective pedagogical prompts 3. Design prompts tailored to different English proficiency levels 4. Differentiate between weak and strong prompts through practice
Content Covered	• What is a prompt? Anatomy of an effective prompt • The CLEAR Framework: Context, Language, Expectations, Audience, Role • Prompting for lesson content: grammar, vocabulary, reading & writing tasks • Adapting prompts for different CEFR levels (A1–C2) • Iterative prompting: refining outputs through follow-up instructions
Activities	• Prompt makeover challenge: improve weak prompts in pairs • Create 3 prompts tailored to different English proficiency levels • Gallery walk: share and evaluate peer prompts • Build a personal 'Prompt Bank' starter document
Assessment	Prompt Bank (3 original prompts with reflections)

WEEK 03	AI as a Teaching Assistant in the English Classroom
Learning Objectives	1. Identify practical roles AI can play as a classroom teaching assistant 2. Use AI tools to plan lessons, differentiate instruction, and create materials 3. Integrate AI responsibly while maintaining teacher authority and judgment 4. Develop strategies to guide students in responsible AI use
Content Covered	• AI as co-planner: generating lesson plans, unit overviews, and schedules • Differentiation with AI: adapting materials for diverse learners • AI for content creation: texts, dialogues, grammar exercises, vocabulary lists • Setting boundaries: when to use AI and when to rely on teacher expertise • Teaching students to use AI as a learning tool, not a shortcut
Activities	• Co-plan a 60-minute English lesson using AI • Differentiation workshop: adapt one activity for three proficiency levels • Debate: 'AI should replace textbooks' — pro/con with AI-generated arguments • Design a classroom AI policy statement
Assessment	AI-assisted lesson plan with teaching rationale

WEEK 04	Technology-Enhanced Assessment & Feedback
Learning Objectives	1. Distinguish between formative and summative AI-supported assessment strategies 2. Use AI tools to design quizzes, rubrics, and diagnostic assessments 3. Generate timely, personalised feedback on student writing using AI 4. Evaluate AI-generated feedback for accuracy and pedagogical appropriateness
Content Covered	• Formative vs. summative assessment: how AI supports both • AI quiz and rubric generators: Quizlet, Kahoot AI, ChatGPT • Writing feedback with AI: grammar, coherence, vocabulary, style • Personalising feedback: tone, CEFR level, and learning goals • Limitations and critical review: when AI feedback needs teacher editing
Activities	• Create a formative quiz using an AI tool for a chosen English topic • Use AI to generate feedback on a sample student paragraph — then edit it • Design a writing rubric with AI and peer-review it • Compare AI feedback vs. teacher feedback on the same student text
Assessment	AI-generated rubric + sample feedback with critical annotations

WEEK 05	Designing Technology-Enhanced Learning Activities
Learning Objectives	1. Design engaging, technology-enhanced activities aligned with learning objectives 2. Apply Bloom's Taxonomy to create AI-powered tasks at different cognitive levels 3. Integrate multimodal tools (audio, video, interactive platforms) into English lessons 4. Ensure digital activities promote critical thinking and authentic language use
Content Covered	• Activity design principles: alignment, engagement, and scaffolding • Bloom's Taxonomy meets AI: from recall to creation tasks • Interactive platforms: Padlet, Nearpod, Edpuzzle, Canva for Education • Multimodal activities: podcast scripts, video summaries, digital storytelling • Gamification and collaborative tasks with technology
Activities	• Design a technology-enhanced activity for each level of Bloom's Taxonomy • Create a digital storytelling task using AI + Canva or similar tool • Explore and demo one interactive platform to the group • Peer feedback session: evaluate each other's activities for alignment and engagement
Assessment	Technology-enhanced activity portfolio (2 complete activities)

WEEK 06	Implementation, Reflection & Future Practice
Learning Objectives	1. Synthesise learning from the programme into a coherent professional action plan 2. Troubleshoot common challenges of AI and technology integration 3. Demonstrate one AI-enhanced teaching strategy to peers 4. Commit to continued professional development in educational technology
Content Covered	• Review: key takeaways from all five sessions • Common implementation challenges and practical solutions • Building your AI toolkit: curated list of tools by teaching purpose • Professional development pathways: communities, courses, and resources • Ethics revisited: responsible, equitable, and sustainable AI use
Activities	• Mini-showcase: each participant presents one AI-enhanced strategy (3 minutes each) • Troubleshooting clinic: group problem-solving for real classroom challenges • Build your personalised AI Teaching Toolkit document • Programme reflection: 'What I will do differently starting next week'
Assessment	Professional Action Plan + Programme Reflection (portfolio submission)

Assessment Overview

Assessment in this programme is portfolio-based and practical. Each week, participants complete a short task that directly applies the session's learning. These tasks accumulate into a professional portfolio that can be used as evidence of continuing professional development. All tasks are assessed on completion and quality of reflection rather than technical perfection.

Week	Assessment Task	Purpose	Type
Week 1	Reflection journal entry (ungraded)	Reflection & orientation	Formative
Week 2	Prompt Bank (3 original prompts with reflections)	Prompt design skills	Portfolio
Week 3	AI-assisted lesson plan with teaching rationale	Lesson planning ability	Portfolio
Week 4	AI-generated rubric + sample feedback with critical annotations	Assessment design & critical review	Portfolio
Week 5	Technology-enhanced activity portfolio (2 complete activities)	Activity design portfolio	Portfolio
Week 6	Professional Action Plan + Programme Reflection (portfolio submission)	Synthesis & professional planning	Summative

Programme Checklist

Use this checklist to verify that all essential components of the programme have been addressed. This checklist is designed for the programme designer and facilitator to review before implementation and for portfolio documentation purposes.

Category	Checklist Item	Status
Programme Goals & Philosophy	Clearly articulated overall programme goals	☐
	AI ethics and responsible use addressed	☐
	Entry-level audience considered throughout	☐
Learning Objectives	Each session has 4 measurable learning objectives	☐
	Objectives use Bloom's Taxonomy action verbs	☐
	Objectives are SMART (Specific, Measurable, Achievable, Relevant, Time-bound)	☐
Programme Outcomes	Knowledge outcome: AI literacy defined and addressed	☐
	Skills outcome: Practical tools for teaching covered	☐
	Attitudinal outcome: Confidence-building activities included	☐
	Professional outcome: Action plan completed by participants	☐
Weekly Content	Week 1 — AI foundations and orientation covered	☐
	Week 2 — Prompt engineering for pedagogy included	☐
	Week 3 — AI as teaching assistant explored	☐
	Week 4 — Technology-enhanced assessment addressed	☐
	Week 5 — Activity design with technology included	☐
	Week 6 — Implementation and reflection completed	☐
Instructional Design	Variety of teaching methods used across sessions	☐
	Instructional design table included in programme	☐
	Both face-to-face and blended delivery considered	☐
Assessment	Each week includes a practical assessment task	☐

Category	Checklist Item	Status
	Assessment tasks build toward final portfolio	☐
	Formative and summative approaches both present	☐
Portfolio Readiness	Programme reflects professional design standards	☐
	Document is institution-neutral and author-owned	☐
	All six sessions are fully documented	☐

Recommended Tools & Resources

AI Tools for Teachers

- ChatGPT (OpenAI) — chat.openai.com — General-purpose AI assistant for content generation and feedback
- Claude (Anthropic) — claude.ai — Conversational AI with strong writing and analysis capabilities
- Gemini (Google) — gemini.google.com — AI assistant integrated with Google Workspace
- Grammarly — grammarly.com — AI-powered writing feedback and grammar correction
- MagicSchool AI — magicschool.ai — AI platform designed specifically for educators

Interactive Classroom Platforms

- Nearpod — nearpod.com — Interactive presentations and formative assessment
- Kahoot! — kahoot.com — AI-enhanced quiz and game-based learning
- Padlet — padlet.com — Collaborative digital boards for ideas and activities
- Edpuzzle — edpuzzle.com — Interactive video lessons with embedded questions
- Canva for Education — canva.com/education — Visual design tool for digital activities

Further Professional Development

- Google for Education Certification — Foundational digital skills for educators
- ISTE (International Society for Technology in Education) — iste.org
- UNESCO AI Competency Framework for Teachers — Available at unesco.org
- Coursera: AI for Everyone (Andrew Ng) — Accessible AI literacy course
