

CONTINUING PROFESSIONAL DEVELOPMENT
TRAINING PROGRAM

Integrating AI in Education

A Comprehensive Three-Month Professional
Development Program for Educators

Designed & Authored by

Rayene Medabis

Instructional Designer

Duration: 12 Weeks | Format: Blended Learning | Level: All Educators
Curriculum + Syllabus + Hands-On Activities + Resources + Assessment Framework

1. Program Overview

This CPD training program is a structured, research-informed, and practice-driven 12-week professional development journey designed to equip educators with the knowledge, skills, and confidence to effectively integrate Artificial Intelligence (AI) tools into their teaching practice. Spanning three progressive months, the program moves from foundational literacy through practical application to advanced and sustainable integration.

Whether you are a classroom teacher, curriculum coordinator, school administrator, or instructional coach, this program provides a supportive and collaborative environment in which to explore, experiment, and develop expertise in AI-enhanced education — without losing sight of sound pedagogy, equity, or educator wellbeing.

Program Title	Integrating AI in Education: A CPD Training Program for Teachers
Duration	12 Weeks (3 Months)
Format	Blended Learning: Synchronous workshops + Asynchronous self-study
Total Hours	Approximately 80 hours (40h contact + 40h self-directed)
Target Audience	K-12 and tertiary educators, instructional coaches, curriculum leaders
Cohort Size	Recommended: 15–25 participants per cohort
Delivery	Online / Hybrid (adaptable to fully in-person)
Certification	Certificate of Completion issued upon finishing all assignments and capstone
Authored by	Rayene Medabis, Instructional Designer

1.1 Target Audience

This program is designed for educators at all career stages who wish to meaningfully integrate AI into their professional practice. No prior experience with AI tools is required. The program welcomes:

- Classroom teachers across all grade levels and subject areas
- Special education and ESL/EFL/ELL teachers
- School librarians and technology integration specialists
- Curriculum designers and instructional coaches
- Department heads and academic leaders seeking to guide their teams
- Teacher educators and university faculty

1.2 Program Philosophy

This program is built on a core conviction: technology should serve pedagogy, not the other way around. AI is a powerful amplifier of excellent teaching — it does not replace the teacher but expands what a teacher can do, see, and create.

Throughout the program, participants are encouraged to approach AI with critical curiosity: embracing its potential while interrogating its limitations, biases, and ethical implications. The program fosters reflective practice, collaboration, and a growth mindset toward technological change.

1.3 Program Structure at a Glance

Month	Theme	Weeks	Focus Areas	Key Deliverable
Month 1	Foundations of AI in Education	1–4	AI literacy, tools overview, lesson planning, ethics	AI Tools Review + Unit Outline
Month 2	Practical AI Integration	5–8	Materials creation, differentiation, assessment, engagement	Teaching Materials Portfolio
Month 3	Mastery & Sustainability	9–12	Admin efficiency, equity, culture, capstone	AI Integration Portfolio (Capstone)

2. Instructional Design Methodology

This program was developed using a multi-framework instructional design approach that draws on several established theories and models to ensure learning experiences are effective, inclusive, evidence-based, and practically grounded. Below is an explanation of each framework used and how it shaped this program.

2.1 Primary Framework: The ADDIE Model

The ADDIE model — Analysis, Design, Development, Implementation, Evaluation — serves as the overarching project management and instructional development framework for this CPD program. ADDIE provides a systematic, iterative structure that ensures every decision is grounded in learner needs and program goals.

ADDIE Phase	What It Means	How It Was Applied in This Program
Analysis	Understand learner needs, context, and gaps	Identified teacher AI anxiety, skills gaps, access issues, and pedagogical goals through a pre-program needs assessment framework
Design	Plan learning objectives, sequence, and assessment strategy	Applied Bloom's Taxonomy to sequence objectives from awareness to creation; designed monthly milestones and formative checkpoints
Development	Create content, activities, resources, and materials	Developed 12 weekly modules with activities, resource packs, prompt templates, and assessment rubrics aligned to each objective
Implementation	Deliver the program to learners	Structured as a blended model with synchronous workshops and asynchronous self-study; designed for facilitators to adapt to their context
Evaluation	Measure effectiveness and iterate	Formative evaluation built into each week (reflection, quizzes, peer feedback); summative evaluation through capstone and post-program survey

2.2 Bloom's Revised Taxonomy — Cognitive Domain

Bloom's Revised Taxonomy (Anderson & Krathwohl, 2001) was used to sequence learning objectives across the three months, ensuring a progressive movement from lower-order to higher-order thinking skills.

- Month 1 — Remember & Understand: Teachers recall and explain AI concepts, tools, and ethical considerations
- Month 2 — Apply & Analyze: Teachers apply AI tools to real classroom tasks and analyze their effectiveness
- Month 3 — Evaluate & Create: Teachers critically evaluate AI integration strategies and create original, sustainable AI implementation plans

Every weekly learning objective in this program is tagged to a Bloom's level, ensuring content and assessment are cognitively aligned.

2.3 Universal Design for Learning (UDL)

The program incorporates UDL principles (CAST, 2018) to ensure it is accessible and effective for all educators, regardless of prior technical experience, learning preferences, or professional context.

UDL Principle	Application in This Program
Multiple Means of Representation	Content is delivered via written guides, video tutorials, visual infographics, live demonstrations, and interactive workshops
Multiple Means of Action & Expression	Assignments can be submitted as written documents, recorded walkthroughs, digital portfolios, or live presentations
Multiple Means of Engagement	Choice boards for tool exploration, flexible pacing for asynchronous components, collaborative and individual task options

2.4 TPACK Framework (Technological Pedagogical Content Knowledge)

The TPACK framework (Mishra & Koehler, 2006) guides how this program helps teachers integrate technology meaningfully. Rather than teaching AI tools in isolation, every tool and activity is situated within the intersection of:

- Content Knowledge (CK) — the teacher's subject-area expertise
- Pedagogical Knowledge (PK) — how to teach effectively
- Technological Knowledge (TK) — how to use AI tools competently

Activities are designed to develop all three dimensions simultaneously, helping teachers understand not just how to use a tool, but when, why, and with what pedagogical intent.

2.5 Connectivism — Learning in the Digital Age

Siemens' (2004) Connectivism theory informs the networked, collaborative design of this program. In the age of AI, knowledge is distributed across networks of people and tools. Teachers are encouraged to build personal learning networks (PLNs), share discoveries with peers, curate trusted AI resources, and position themselves as ongoing learners rather than endpoint experts.

This is reflected in weekly collaborative forums, peer feedback assignments, and the final community of practice planning component in Week 11.

2.6 The 70-20-10 Learning Model

This program follows the 70-20-10 model of professional learning, which holds that:

- 70% of meaningful learning comes from on-the-job, experiential practice (hands-on workshops, classroom application tasks)
- 20% comes from social learning with colleagues (peer review, collaborative activities, discussion forums, mentoring pairs)
- 10% comes from structured formal instruction (lectures, readings, tutorials, webinars)

The heavy emphasis on hands-on activities, peer collaboration, and real classroom application across all 12 weeks directly reflects this model.

2.7 Constructivist Learning Theory

Grounded in the work of Vygotsky and Dewey, this program adopts a constructivist approach in which participants build knowledge actively through experience, reflection, and dialogue. Each week includes opportunities for exploration, experimentation, and critical reflection, allowing teachers to construct their own understanding of AI in the context of their unique classroom environment.

2.8 Andragogy — Adult Learning Principles

Applying Knowles' (1980) principles of adult learning, the program is designed with the following in mind:

- Self-direction: Participants have choice in tools they explore and subjects they apply learning to
- Relevance: Every activity is connected to real classroom tasks and professional goals
- Experience: Prior teaching experience is treated as a valuable asset, not a barrier
- Problem-centeredness: Learning is structured around real problems teachers face (time, differentiation, assessment workload)
- Motivation: Participants understand the 'why' before the 'how' in each module

3. Program Goals and Learning Outcomes

3.1 Overall Program Goals

By the end of this three-month CPD program, participants will have achieved the following overarching goals:

1. Develop confident, critical, and ethically-grounded AI literacy as professional educators
2. Integrate AI tools practically into lesson planning, materials creation, assessment design, and administrative tasks
3. Design and implement AI-enhanced learning experiences that are inclusive, equitable, and pedagogically sound
4. Critically evaluate AI-generated content and maintain high standards of academic and professional integrity
5. Build a sustainable personal practice and school culture that embraces responsible AI use in education
6. Support student development of AI literacy and digital citizenship in age-appropriate ways
7. Contribute to a collaborative professional community of educators navigating AI in education

3.2 Learning Outcomes by Month

MONTH 1: Foundations of AI in Education

Upon completing Month 1, participants will be able to:

- Define artificial intelligence and explain key concepts including machine learning, large language models, and generative AI in terms accessible to fellow educators
- Identify and categorize the major types of AI tools available to educators, evaluating them using a structured pedagogical framework
- Use AI tools to generate an initial lesson plan draft and critically review, edit, and improve AI-generated content
- Explain the key ethical considerations of AI in education including bias, data privacy, academic integrity, and equity of access
- Articulate a personal, informed position on AI use in their own professional practice

MONTH 2: Practical AI Integration

Upon completing Month 2, participants will be able to:

- Create a diverse set of differentiated teaching materials (worksheets, presentations, activities, readings) using AI tools
- Design and implement personalized learning pathways using AI-powered platforms

- Build varied, high-quality assessment tools — including rubrics, quizzes, projects, and formative checks — using AI assistance
- Use AI to generate timely, specific, and constructive student feedback at scale
- Design and facilitate interactive, AI-enhanced learning experiences that measurably increase student engagement

MONTH 3: Mastery & Sustainability

Upon completing Month 3, participants will be able to:

- Apply AI tools to administrative tasks (report writing, parent communication, meeting summaries) to reclaim meaningful professional time
- Develop, communicate, and implement a classroom or school-level AI use policy that addresses equity, access, and academic integrity
- Design and deliver a mini-lesson teaching students to use AI as a critical thinking and learning tool
- Create and present a comprehensive AI Integration Portfolio demonstrating growth and future planning
- Identify strategies to stay current with AI developments and contribute to a professional learning community focused on AI in education

4. Month 1 Curriculum

MONTH ONE

Foundations of AI in Education

Weeks 1 – 4

Month 1 builds the knowledge foundation that every subsequent week depends upon. Teachers move from uncertainty and anxiety to confident, critical literacy about AI. By the end of Week 4, every participant will have explored the AI tools landscape, generated their first AI-assisted lesson, and begun developing a principled personal stance on AI ethics.

Month 1 Learning Focus Areas
- AI literacy: understanding concepts, types, and the current landscape - Tool exploration: hands-on familiarity with key AI platforms for educators - Lesson planning: generating and critically reviewing AI-assisted lesson materials - Ethics and criticality: bias, privacy, academic integrity, and equitable AI use

Week	Title	Bloom's Level	Key Deliverable
Week 1	Introduction to AI in Education	Remember Understand	AI Readiness Reflection
Week 2	Exploring the AI Toolkit for Educators	Understand Apply	AI Tool Review Report
Week 3	AI for Lesson Planning	Apply Analyze	AI-Assisted Unit Outline
Week 4	Critical Thinking, Ethics, and AI	Understand Analyze Evaluate	Classroom AI Use Policy Document

WEEK
1

Introduction to AI in Education

Duration	4 hours total
Delivery Mode	Synchronous workshop (2h) + Asynchronous self-study (2h)
Bloom's Level	Remember Understand

Week 1 launches the program by building a shared vocabulary and foundational understanding of Artificial Intelligence. Teachers explore what AI actually is — demystifying common misconceptions —

and begin to see how AI is already present in their professional and personal lives. By the end of the week, participants feel curious and informed rather than anxious or overwhelmed.

Learning Objectives

- Define Artificial Intelligence and distinguish it from related concepts (machine learning, deep learning, generative AI, large language models)
- Identify at least five ways AI is currently being used in education globally
- Explain the difference between narrow AI and general AI, and why it matters for educators
- Reflect on personal assumptions, hopes, and concerns about AI in their own teaching context
- Complete a baseline AI readiness self-assessment to guide personal learning goals throughout the program

Topics Covered

- What is AI? Core concepts explained for non-technical educators
- A brief history of AI: From rules-based systems to generative AI
- Types of AI relevant to education: Recommendation engines, NLP tools, generative AI, image AI
- AI in everyday life: The tools teachers and students already use
- The AI in Education (AIED) landscape: Opportunities, risks, and current state
- Common myths and misconceptions about AI that teachers should know

Hands-On Activities

Activity 1: AI in My Life Audit

Participants map all the AI tools and systems they use daily (personal and professional) onto a printed or digital chart. They then identify which of these are already being used educationally. The exercise surprises most participants by revealing how embedded AI already is in their world, reducing initial anxiety.

🕒 Duration: 30 minutes | 🗑️ Format: Individual, then paired discussion

Activity 2: AI Myths vs. Facts Card Sort

In small groups, participants receive a set of cards with statements about AI (some true, some myths). They sort them into 'True', 'False', and 'Unsure' and then discuss the reasoning behind their choices. The facilitator debriefs with evidence-based clarifications.

🕒 Duration: 45 minutes | 🗑️ Format: Groups of 3-4

Activity 3: AI Readiness Self-Assessment

Participants complete a structured self-assessment tool evaluating their current level of AI knowledge, comfort, and usage across five domains: understanding, tool use, pedagogy, ethics, and student-facing use. Results are used to set personal learning goals for the 12-week program.

🕒 Duration: 20 minutes | 🗑️ Format: Individual + reflection journal entry

Resources & Tools

- ▶ **AI for Education (ai4education.co.uk)** — Free, educator-specific AI literacy resource hub with guides and videos
- ▶ **Teachable Machine (Google)** — Free, visual tool to see how machine learning actually works, hands-on
- ▶ **MIT RAISE: Day of AI Curriculum** — Free K-12 curriculum units introducing AI concepts
- ▶ **UNESCO: AI in Education Overview Report (2023)** — Authoritative overview of AI in global education contexts
- ▶ **"AI Literacy" — Elements & Assessment (Long et al., 2020)** — Research paper defining AI literacy competencies for educators

Trainer Tips

Acknowledge anxieties openly at the start — many teachers feel left behind. Normalize curiosity. | Use concrete, familiar examples (Netflix recommendations, spell-check, Google Maps) before moving to education-specific AI. | Encourage participants to keep a reflection journal throughout the program.

Common Challenges

Some participants may be skeptical or resistant. Focus on empowerment, not pressure. | Wide variation in prior AI knowledge. Use the self-assessment to differentiate support early.

WEEK 1 ASSIGNMENT: AI Readiness Reflection

Write a 400-word reflection addressing: (1) Three things you learned this week that surprised or changed your thinking; (2) Your greatest hope and greatest concern about AI in your teaching practice; (3) Two personal learning goals for this program. Submit to the shared discussion forum and respond meaningfully to two peers.

🕒 Estimated Time: 45 minutes | Format: Written reflection + forum post

WEEK
2

Exploring the AI Toolkit for Educators

Duration	4 hours total
Delivery Mode	Synchronous workshop (2h) + Asynchronous tool exploration (2h)
Bloom's Level	Understand Apply

This week transforms the theoretical understanding from Week 1 into hands-on familiarity with a curated set of AI tools specifically relevant to educators. Participants create accounts, explore interfaces, test capabilities, and begin building a personalised AI toolkit aligned to their subject area and school context. A structured evaluation framework helps teachers make informed, pedagogically-grounded tool choices.

Learning Objectives
• Set up and navigate accounts on at least four major AI platforms used in education • Categorize AI tools for education into functional groups: language, image, audio/video, productivity, and student-facing tools • Apply a structured evaluation framework (pedagogy, access, safety, copyright) to assess two AI tools • Generate a first AI-assisted educational resource and critically compare it to a human-authored version • Identify the most relevant AI tools for their specific subject area, grade level, and school context

Topics Covered
• Overview of the AI for Education landscape: Key platforms in 2024–25 • Language AI tools: ChatGPT, Claude, Gemini, Copilot — strengths and differences • Image and visual AI: Canva AI, Adobe Firefly, Microsoft Designer, DALL-E • Video and audio AI: Synthesia, Descript, ElevenLabs, Otter.ai • AI productivity tools: Notion AI, Grammarly, Google Workspace AI, Microsoft Copilot • Student-facing AI: Khanmigo, MagicSchool AI, Diffit, SchoolAI • Evaluating AI tools: Pedagogy, access, data privacy, copyright, bias, cost

Hands-On Activities

Activity 1: AI Tools Speed Dating

Stations are set up (physical or virtual) for 6 different AI tools. Participants rotate every 10 minutes, completing a structured 'first impression' card for each: What does it do? What could I use it for? Any concerns? The activity builds broad familiarity before deeper exploration.

🕒 Duration: 60 minutes | Format: Rotating groups

Activity 2: Side-by-Side Resource Comparison

Using a topic from their own subject, participants: (1) Create a resource without AI (a paragraph, a discussion question set, etc.), then (2) use an AI tool to generate a similar resource. They annotate the differences, noting quality, accuracy, voice, and usefulness. Discussion follows on when AI adds value and when it doesn't.

🕒 Duration: 40 minutes | Format: Individual, followed by pair discussion

Activity 3: AI Tool Evaluation Workshop

Using the provided AI Evaluation Rubric (covering pedagogical alignment, accessibility, data privacy, bias, copyright, student safety, and cost), participants formally evaluate two AI tools relevant to their teaching context. They share findings in a shared class document.

🕒 Duration: 30 minutes | Format: Individual + shared class document

Resources & Tools

- ▶ **MagicSchool.ai** — Purpose-built AI suite for teachers: lesson plans, rubrics, IEPs, communication, and more
- ▶ **Diffit (diffit.me)** — AI tool for differentiating texts and resources at different reading levels
- ▶ **Common Sense Media AI Reviews** — Independent, educator-focused reviews of AI tools with privacy and safety ratings
- ▶ **"AI Tools for Teachers" — TeachThought Guide (2024)** — Comprehensive curated list with subject-area filters
- ▶ **Claude.ai / ChatGPT / Google Gemini** — The three major general-purpose AI assistants — all free tiers available

Trainer Tips

Have fallback activities for when tools are slow or unavailable — this happens often! | Emphasise that AI tools change rapidly — the skill is evaluation and adaptation, not memorising tools. | Allow teachers to choose tools relevant to their own subject area during free exploration.

Common Challenges

School firewalls may block some platforms — check IT permissions before the workshop. | Information overload with too many tools. Focus on depth over breadth: explore 3-4 well rather than 10 superficially.

WEEK 2 ASSIGNMENT: AI Tool Review Report

Using the provided evaluation rubric, write a structured 500-word review of TWO AI tools of your choice. For each tool, address: (1) What it does and how to use it; (2) Pedagogical applications in your specific teaching context; (3) Evaluation against the rubric criteria; (4) Your recommendation: Would you use it? Under what conditions? Format: Use the provided review template.

🕒 Estimated Time: 60 minutes | Format: Structured written report (template provided)

WEEK
3

AI for Lesson Planning

Duration	5 hours total
Delivery Mode	Synchronous workshop (3h) + Asynchronous application (2h)
Bloom's Level	Apply Analyze

This is the week where learning becomes distinctly practical. Teachers use AI tools to plan real lessons for real students. The focus is on developing an effective, sustainable AI-assisted planning workflow — learning to write strong prompts, critically evaluate AI output, and efficiently refine it into high-quality, curriculum-aligned lesson plans. The human-in-the-loop principle is central: AI drafts, teachers decide.

Learning Objectives

- Write effective AI prompts for lesson planning using structured prompt engineering techniques
- Generate a complete AI-assisted lesson plan and evaluate it against curriculum standards and pedagogical best practice
- Identify the types of edits, additions, and corrections AI-generated lesson plans typically require
- Describe a sustainable AI-enhanced lesson planning workflow that saves time without sacrificing quality
- Create a prompt template library for their specific subject area and grade level

Topics Covered

- The AI-assisted planning workflow: from brief to finished lesson plan
- Prompt engineering for educators: The RACE framework (Role, Action, Context, Expectation)
- Writing effective prompts: specificity, constraints, tone, and format instructions
- What AI does well in lesson planning and where it consistently needs human correction
- Integrating curriculum standards, differentiation, and assessment into AI prompts
- Building and maintaining a personal prompt library
- The human-in-the-loop principle: Why teachers must always be the final decision-maker

Hands-On Activities

Activity 1: Prompt Engineering Workshop

Participants learn and practice the RACE prompt framework through a structured sequence of increasingly complex planning prompts. They compare a generic prompt ('Write a lesson plan on photosynthesis') to a detailed, professional prompt and analyse the quality difference in AI output. They then refine 3 of their own prompts iteratively.

🕒 Duration: 60 minutes | Format: Whole-group instruction + individual practice

Activity 2: Lesson Plan Sprint

Using their own subject area and an upcoming topic, participants use an AI tool to generate a complete lesson plan in under 10 minutes using a pre-structured prompt. They then spend 20 minutes critically reviewing and editing the plan using a Lesson Plan Quality Checklist. Peers then swap and provide structured feedback.

🕒 Duration: 60 minutes | Format: Individual sprint + peer review pairs

Activity 3: Prompt Library Building Session

Participants collaboratively build a shared digital prompt library for their school/cohort. Each person contributes 3 refined, tested prompts for their subject area, including: the prompt text, the AI tool used, the context, and quality notes. The shared library becomes a cohort resource.

🕒 Duration: 40 minutes | Format: Collaborative (shared Google Doc or Notion page)

Resources & Tools

- ▶ **MagicSchool AI — Lesson Plan Generator** — Purpose-built AI for teacher lesson planning with curriculum integration
- ▶ **RACE Prompt Framework Guide** — Provided as a program handout; also available at prompts.chat
- ▶ **Eduaide.ai** — AI teaching assistant specifically designed for lesson and unit planning
- ▶ **Curipod.com** — AI-powered interactive lesson creator with student engagement features
- ▶ **"Prompt Engineering for Educators"** — ISTE Resource Library (2024)

Trainer Tips

Model the full AI planning workflow live during the synchronous session, including mistakes and corrections. | Emphasise that the best AI prompts are detailed. Invest 5 minutes writing a great prompt to save 50 minutes editing. | Remind participants that AI doesn't know their specific students, school context, or national curriculum — those additions are the teacher's critical contribution.

Common Challenges

Teachers may over-trust AI output. Build in a mandatory critical review step in every activity. | Prompt writing feels unnatural at first. Use sentence starters and templates as scaffolding.

WEEK 3 ASSIGNMENT: AI-Assisted Unit Outline

Choose an upcoming topic or unit from your own teaching context. Using AI tools and the RACE prompt framework, create a complete 3-5 lesson unit outline that includes: learning objectives, a lesson sequence with brief overviews, suggested activities, differentiation notes, and assessment ideas. Include a brief (200-word) reflection on the process: What did AI do well? What did you have to change? How long did it take compared to your usual planning?

🕒 Estimated Time: 90 minutes | Format: Unit outline document + written reflection

WEEK

4

Critical Thinking, Ethics, and AI

Duration	4 hours total
Delivery Mode	Synchronous seminar (2h) + Asynchronous reading and task (2h)
Bloom's Level	Understand Analyze Evaluate

The final week of Month 1 takes a step back from tools and workflows to engage with the deeper questions: What are the ethical implications of AI in education? How does bias manifest in AI systems, and what are the consequences for students? How should schools respond to academic integrity challenges? This week develops the critical frameworks teachers need to use AI responsibly and guide students to do the same.

Learning Objectives

- Explain how bias enters AI systems and identify at least three ways biased AI can negatively impact students
- Apply an ethical analysis framework to a real-world AI-in-education scenario
- Describe current best practices for addressing academic integrity in the age of generative AI
- Identify data privacy risks associated with using AI tools with students, including GDPR/FERPA considerations
- Begin drafting a classroom AI use philosophy statement aligned to personal values and school context

Topics Covered

- How AI systems learn and why bias is unavoidable — but manageable
- Types of AI bias: Training data bias, algorithmic bias, output bias, representational bias
- Ethical frameworks for technology use in education: Care ethics, justice, autonomy
- Academic integrity in the generative AI era: Defining cheating vs. legitimate AI use
- Data privacy and AI: What teachers need to know about COPPA, GDPR, FERPA, and student data
- Fact-checking and critical evaluation of AI-generated content
- Developing a classroom AI use policy: Key elements and considerations

Hands-On Activities

Activity 1: Bias Detection Lab

Participants submit the same prompt to two different AI tools requesting content about a cultural group, historical event, or global issue. They compare outputs using a Bias Audit Checklist, identifying: Whose perspectives are centred? Whose are absent? What assumptions are embedded? What stereotypes, if any, appear? Findings are shared and discussed.

🕒 Duration: 45 minutes | 🗑️ Format: Pairs, then whole-group discussion

Activity 2: AI Integrity Scenario Workshop

Groups receive 5 academic integrity case scenarios involving generative AI (e.g., a student submits a fully AI-written essay; a student uses AI to translate and rephrase sources; a teacher uses AI to write student feedback). They apply an ethical decision-making framework and draft a policy response for each case.

🕒 Duration: 45 minutes | 🗑️ Format: Groups of 4-5, structured debrief

Activity 3: Classroom AI Policy Draft

Using a provided policy template, participants draft their own classroom AI use statement addressing: what AI use is permitted, what requires disclosure, what constitutes misuse, how AI will be used for inclusion and support, and how the policy will be communicated to students and parents.

🕒 Duration: 30 minutes | 🗑️ Format: Individual, with peer feedback

Resources & Tools

- ▶ **UNESCO Recommendation on AI Ethics (2021)** — The global ethical framework for AI — accessible summary for educators
- ▶ **IB Academic Integrity Policy (2023)** — Example of how leading institutions are addressing AI integrity
- ▶ **Turnitin AI Detection Educator Guide** — Practical guide to AI detection tools, limitations, and policy design
- ▶ **Common Sense Media Digital Citizenship Curriculum** — Free, grade-levelled resources for teaching AI ethics to students
- ▶ **"Generative AI and Academic Integrity" — Times Higher Education (2024)**

Trainer Tips

This session can surface strong emotions and disagreements — welcome them. Productive tension leads to deep learning. | Avoid presenting AI ethics as black and white. Model nuanced, context-dependent thinking. | Connect policy discussions to the school's existing digital citizenship and academic integrity frameworks.

Common Challenges

Some teachers may feel overwhelmed by privacy regulations. Focus on practical decision rules, not legal complexity. | Bias discussions may become uncomfortable. Establish clear, respectful discussion norms at the start.

WEEK 4 ASSIGNMENT: Classroom AI Use Policy Document

Using the template from this week's activity and feedback from peers, write a polished Classroom AI Use Policy (400-600 words) for your teaching context. The policy should include: (1) A rationale statement explaining why AI can be used responsibly in your classroom; (2) Permitted uses of AI; (3) Prohibited uses; (4) Requirements for disclosure and attribution; (5) How violations will be handled; (6) How the policy will be reviewed and updated. Present to the cohort in a brief 3-minute share-out at the start of Week 5.

🕒 Estimated Time: 60 minutes | Format: Policy document (Word or PDF)

5. Month 2 Curriculum

MONTH TWO

Practical AI Integration

Weeks 5 – 8

Month 2 moves from 'knowing about AI' to 'doing with AI'. Every week is structured around a specific classroom application area: materials creation, personalisation, assessment, and student engagement. Participants are encouraged to trial their AI-designed resources with real students during this month and bring observations back to the cohort.

Month 2 Learning Focus Areas	
•	Materials creation: Worksheets, presentations, reading texts, and visual resources using AI
•	Differentiation: Tiered resources, adaptive learning pathways, and ELL/SEN support
•	Assessment design: Quizzes, rubrics, feedback templates, and AI-resistant task design
•	Student engagement: Interactive tools, gamification, and student-facing AI literacy

Week	Title	Bloom's Level	Key Deliverable
Week 5	AI for Teaching Materials and Content Creation	Apply Create	Complete Teaching Materials Pack
Week 6	Personalized Learning and Differentiation with AI	Apply Analyze Create	Differentiated Learning Unit Design
Week 7	AI in Assessment Design	Apply Analyze Create	Complete AI-Assisted Assessment Package
Week 8	AI for Student Engagement and Interactive Learning	Apply Create	Interactive AI-Enhanced Lesson Design

WEEK
5

AI for Teaching Materials and Content Creation

Duration	5 hours total
Delivery Mode	Synchronous workshop (3h) + Asynchronous creation sprint (2h)
Bloom's Level	Apply Create

Month 2 launches with the most immediately practical module of the program: using AI to create professional, diverse, and engaging teaching materials. Teachers learn to use AI to design worksheets, presentations, reading passages, exercises, and visual resources — cutting preparation time while

maintaining or improving quality. Copyright, attribution, and originality in AI-generated content are addressed head-on.

Learning Objectives
● Use AI tools to create a complete set of teaching materials for a single lesson, including a worksheet, reading passage, and visual resource
● Apply AI to adapt existing materials to different reading levels, learning styles, and learner profiles
● Design visually engaging presentations and infographics using AI-powered design tools
● Identify copyright and attribution responsibilities when using AI-generated educational content
● Develop a personal AI-enhanced materials creation workflow that integrates into weekly preparation routines

Topics Covered
● AI for worksheets, exercises, and practice activities: Tools and techniques
● AI for reading passages and text adaptation: Adjusting Lexile levels, simplifying, translating
● AI for visual materials: Presentations, infographics, diagrams, and visual summaries
● AI for audio and video materials: Creating narrated slideshows, explainer videos, and podcasts
● Copyright, attribution, and ownership of AI-generated educational content
● Quality control for AI-generated materials: The teacher review process
● Building a personal digital resource library with AI-created materials

Hands-On Activities

Activity 1: Materials Creation Sprint

Given a curriculum topic from their subject area, participants have 45 minutes to create a complete 'lesson materials pack' using AI tools. The pack includes: a one-page reading or information text, a 10-question mixed-format worksheet, and a 5-slide summary presentation. Participants share and peer-review each other's packs using a Materials Quality Checklist.

🕒 Duration: 45 minutes | Format: Individual sprint + peer review

Activity 2: Text Differentiation Workshop

Participants take a complex text (e.g., a science article, a historical document, a literary extract) and use AI to create three differentiated versions: below grade level, at grade level, and above grade level. They also create an ELL/EFL simplified version. They compare the versions and discuss what the AI got right and wrong.

🕒 Duration: 50 minutes | Format: Individual + small group comparison

Activity 3: Visual Resource Design Challenge

Using Canva AI, Microsoft Designer, or Adobe Express, participants design a visually engaging one-page infographic or study guide on a topic from their curriculum. They experiment with AI-generated images, layout suggestions, and text styling, then reflect on the creative process and copyright implications.

🕒 Duration: 40 minutes | 📄 Format: Individual, shared gallery review

Resources & Tools

- ▶ **Canva for Education (canva.com/education)** — Free AI-powered design tool for teachers and students with templates
- ▶ **Diffit.me** — AI tool for creating differentiated reading passages and activities
- ▶ **Curipod.com** — AI-generated interactive lessons and slides with engagement features
- ▶ **Adobe Express for Education** — Free visual content creation with AI tools for teachers
- ▶ **BookWidgets** — AI-assisted interactive worksheet and activity creator

Trainer Tips

Model 'good enough vs. perfect' — AI materials need review, not perfection. | Encourage participants to adapt existing materials rather than always starting from scratch. | Build in time to discuss copyright. Teachers are often unaware of their responsibilities with AI-generated content.

Common Challenges

AI-generated images can be stereotypical or culturally inappropriate. Always review before use with students. | Quality varies significantly between tools. Encourage experimentation across multiple platforms.

WEEK 5 ASSIGNMENT: Complete Teaching Materials Pack

Create a complete, classroom-ready AI-assisted materials pack for one full lesson in your subject area. The pack must include: (1) A reading or information text; (2) A worksheet with at least 8 varied question types; (3) A differentiated version of the worksheet (for 2 learner profiles); (4) A visual resource (infographic, slide, or graphic organiser); (5) A 200-word reflection on your creation process, time saved, and quality observations. Submit as a single PDF or shared folder.

🕒 Estimated Time: 90 minutes | 📄 Format: Digital materials pack + reflection

WEEK
6

Personalized Learning and Differentiation with AI

Duration	5 hours total
Delivery Mode	Synchronous workshop (2.5h) + Asynchronous application (2.5h)
Bloom's Level	Apply Analyze Create

This week explores one of the most powerful applications of AI in education: personalized learning and differentiation at scale. AI allows teachers to design learning pathways that respond to individual student needs — something that was previously only possible with enormous time investment. Participants design adaptive learning sequences, tiered resources, and AI-assisted support structures for diverse learners including ELL students and students with special educational needs.

Learning Objectives

- Design a differentiated learning sequence for a topic using AI-generated tiered resources
- Create personalized learning pathways using AI platforms that adapt to student progress
- Use AI to generate adapted materials for ELL/EFL students at different language proficiency levels
- Identify AI tools that can support students with specific learning differences (dyslexia, ADHD, processing differences)
- Evaluate the equity implications of AI-based personalization, including risk of learning siloes

Topics Covered

- Differentiation and AI: What's possible now vs. what's still a human role
- Tiered instruction: Using AI to create Bronze/Silver/Gold versions of tasks
- Personalized learning platforms: Khan Academy, DreamBox, Synthesis, and adaptive LMS tools
- AI for English Language Learners: Translation, simplification, and vocabulary scaffolding
- AI and special educational needs: Text-to-speech, reading support, visual schedules, social stories
- Learning profiles and AI: Designing for multiple learning preferences without stereotyping
- The equity paradox: When AI personalization can narrow rather than expand learning

Hands-On Activities

Activity 1: Tiered Resource Design Lab

Participants choose one task or activity from their curriculum and use AI to create three differentiated versions: scaffolded (with additional support), standard, and extended (for challenge). They use a Differentiation Quality Checklist to evaluate whether each version genuinely meets different learner needs rather than just being harder or easier.

🕒 Duration: 50 minutes | 📋 Format: Individual, with partner feedback

Activity 2: ELL Support Materials Workshop

Using AI tools, participants create a vocabulary-supported version of a curriculum text for ELL students at beginner, intermediate, and advanced English levels. They add glossaries, simplified sentence structures, and visual supports using AI assistance. They then evaluate which AI tools perform best for this task.

🕒 Duration: 45 minutes | 📋 Format: Individual + group comparison

Activity 3: Adaptive Learning Platform Exploration

Participants explore one AI-powered personalized learning platform (Khan Academy, Khanmigo, or Synthesis) from the student perspective, then from the teacher analytics dashboard. They map the platform's adaptive capabilities against their own students' needs and discuss where AI personalization is strong and where teacher judgment remains essential.

🕒 Duration: 40 minutes | 📋 Format: Individual exploration + group debrief

Resources & Tools

- ▶ **Khan Academy + Khanmigo** — Free adaptive learning with AI tutoring across all subjects
- ▶ **Synthesis.com** — AI-powered problem-solving and critical thinking platform for students
- ▶ **Immersive Reader (Microsoft)** — Free accessibility tool with AI features for diverse learners
- ▶ **Newsela.com** — AI-powered text levelling for news and curriculum articles
- ▶ **Speechify** — AI text-to-speech tool supporting readers with dyslexia and visual processing differences

Trainer Tips

Caution against 'tracking' students in rigid AI pathways. AI should expand options, not limit them. | Discuss parent/guardian consent requirements when using third-party AI platforms with students. | Invite a SENCO or ELL specialist to co-facilitate this week if possible.

Common Challenges

AI differentiation tools can oversimplify, stripping out rich language from texts. Always review simplified versions for quality. | Student data privacy is more complex with adaptive platforms. Know your school's data agreements before recommending tools.

WEEK 6 ASSIGNMENT: Differentiated Learning Unit Design

Design a differentiated mini-unit (3 lessons) on a topic from your curriculum using AI tools. For each lesson, provide: (1) Core task for all learners; (2) Two differentiated versions (scaffolded and

extended); (3) ELL/language support notes; (4) Notes on how AI was used in the design process. Include a 250-word reflection on the equity implications of the choices you made.

🕒 Estimated Time: 100 minutes | Format: Digital unit plan + reflection

WEEK

7

AI in Assessment Design

Duration	5 hours total
Delivery Mode	Synchronous workshop (3h) + Asynchronous task (2h)
Bloom's Level	Apply Analyze Create

Assessment design is one of the most time-consuming aspects of teaching, and AI can dramatically accelerate the creation of high-quality, varied assessments. This week takes teachers through the full assessment design process using AI — from generating quiz questions and project briefs to building detailed rubrics and analyzing student performance data. The week also addresses critical questions around AI-proof assessment design and the limitations of AI-assisted grading.

Learning Objectives

- Create varied assessment tools (quizzes, project briefs, written prompts, rubrics) using AI assistance
- Build a detailed, criterion-referenced marking rubric using AI for a performance-based assessment task
- Use AI to generate personalized formative assessment questions based on learning objectives
- Apply AI-generated feedback templates to improve the quality and speed of student feedback provision
- Evaluate the potential and limitations of AI-assisted marking and automatic feedback tools

Topics Covered

- Assessment types and AI: What AI can help create (and what still needs the teacher)
- Using AI to generate varied question types: Multiple choice, short answer, extended response, case studies
- Bloom's Taxonomy and assessment design: Using AI to target specific cognitive levels
- Rubric design with AI: Creating criterion-referenced, performance-level rubrics efficiently
- Formative assessment and AI: Exit tickets, quick checks, and adaptive quizzes
- AI-assisted feedback: Templates, personalisation, and the ethics of automated feedback
- Designing AI-resistant assessments: Performance tasks, portfolios, and authentic assessment

Hands-On Activities

Activity 1: Assessment Design Workshop

Participants use AI to create a complete assessment package for one unit from their teaching: (1) A 15-question mixed-format quiz; (2) An extended written or performance task brief; (3) A full, criterion-referenced rubric for the performance task. Each assessment is tagged to a Bloom's level. Participants then peer-review each other's packages using an Assessment Quality Checklist.

🕒 Duration: 75 minutes | Format: Individual + peer review

Activity 2: AI Feedback Generation Lab

Participants provide an AI tool with a set of anonymised sample student responses (or teacher-created examples representing different quality levels). They prompt the AI to generate differentiated feedback for each response and critically evaluate the quality, accuracy, and appropriateness of the AI-generated feedback. They identify what needs to be added, changed, or removed.

🕒 Duration: 45 minutes | Format: Small groups + whole-group debrief

Activity 3: AI-Resistant Assessment Redesign

Participants take one existing assessment task (e.g., an essay or homework exercise) that could easily be completed using AI, and redesign it to require genuine student thinking that AI cannot replicate: personal experience, in-class observation, physical demonstration, or oral defence component. Groups share their redesigns and discuss trade-offs.

🕒 Duration: 30 minutes | Format: Groups of 3-4

Resources & Tools

- ▶ **Quizlet (AI features)** — AI-powered flashcard and quiz generation from uploaded texts
- ▶ **Formative.com** — Real-time formative assessment platform with AI question generation
- ▶ **MagicSchool AI — Rubric Generator** — Teacher-friendly AI rubric builder with customisation
- ▶ **Gradescope** — AI-assisted grading tool for written and structured assessments
- ▶ **"Assessment in the Age of AI" — EduTopia Special Report (2024)**

Trainer Tips

Remind participants that AI-generated rubrics often need significant refinement to match local curriculum language and standards. | AI feedback templates should always be personalised with specific evidence from student work — never sent verbatim. | Focus 20% of this week on AI-resistant design — it's a crucial professional skill for the current era.

Common Challenges

AI-generated multiple choice questions often contain ambiguous distractors. Always human-review before use. | Teachers may over-rely on AI feedback, reducing the relational quality of teacher-student feedback. Discuss the balance.

WEEK 7 ASSIGNMENT: Complete AI-Assisted Assessment Package

Create a full assessment package for one unit or topic in your teaching context using AI tools. The package must include: (1) A formative check (10-12 questions); (2) A summative assessment task brief; (3) A detailed rubric for the summative task (minimum 4 criteria, 4 performance levels); (4) A sample feedback template for two different performance levels. Submit with a 200-word reflection on what you changed from the AI's initial output and why.

🕒 Estimated Time: 90 minutes | Format: Assessment package document + reflection

WEEK

8

AI for Student Engagement and Interactive Learning

Duration	4.5 hours total
Delivery Mode	Synchronous workshop (2.5h) + Asynchronous design task (2h)
Bloom's Level	Apply Create

This week explores how AI can make lessons more interactive, engaging, and responsive to students in real time. From AI-powered discussion facilitation to gamified learning experiences, participants design and test learning experiences that put student engagement at the centre. The week culminates in a prototype interactive lesson that participants will trial in their own classrooms.

Learning Objectives

- Design an interactive, AI-enhanced lesson that incorporates student-facing AI engagement tools
- Use AI to facilitate structured academic discussions and collaborative thinking activities
- Create a gamified learning experience using AI tools for a specific learning objective
- Identify age-appropriate AI tools for students that support learning without replacing thinking
- Reflect on the ethics of AI-driven engagement design and its long-term effects on learner autonomy

Topics Covered

- AI and student engagement: What the research says (motivation, attention, agency)
- Interactive AI tools for classrooms: Nearpod, Mentimeter, Padlet AI, Poll Everywhere
- AI for structured academic discussions: Socratic seminars, Fishbowl with AI facilitation
- Gamification with AI: Creating escape rooms, challenges, and narrative learning experiences
- AI tutoring tools for students: Khanmigo, Socratic by Google, Perplexity
- Balancing AI engagement and deep thinking: Avoiding over-stimulation and passive consumption
- Student AI literacy: Teaching students to be critical, creative users of AI tools

Hands-On Activities

Activity 1: Interactive Lesson Prototype

Participants design a 20-minute interactive lesson segment using at least two AI engagement tools (e.g., an AI-generated Nearpod activity + a Padlet AI collaborative task). They present their prototype to a partner who acts as a 'student', then provides structured feedback. The prototype is refined based on feedback.

🕒 Duration: 60 minutes | Format: Individual design + partner testing

Activity 2: AI Gamification Design Sprint

Using AI tools (e.g., ChatGPT for game design + Canva for visuals), participants create a simple gamified learning challenge for a topic in their curriculum: a quiz game, a scenario-based challenge, or a collaborative problem-solving activity. They play-test each other's games and evaluate learning alignment.

🕒 Duration: 45 minutes | Format: Groups of 3, cross-group testing

Activity 3: Student-Facing AI Exploration

Participants use the Khanmigo or Socratic AI tool from the student perspective, attempting to learn something new. They then discuss: How did the AI support your thinking? Where did it lead you astray? What would your students experience? What guardrails are needed? They develop a student guide for appropriate use of one AI tool in their classroom.

🕒 Duration: 30 minutes | Format: Individual exploration + group debrief

Resources & Tools

- ▶ **Nearpod.com** — AI-enhanced interactive lesson platform with real-time student responses
- ▶ **Mentimeter.com** — AI-powered interactive presentation with live polls and word clouds
- ▶ **Khanmigo (Khan Academy)** — AI tutoring assistant for students with Socratic questioning approach
- ▶ **Brainpop.com** — AI-supported learning platform for K-8 with animated content and quizzes
- ▶ **Diffit.me + Padlet** — Pair for collaborative reading and response activities

Trainer Tips

Test all student-facing AI tools yourself before introducing them to students. | Discuss with participants how to scaffold student use of AI tools so that engagement doesn't replace deep thinking. | Invite a student panel (if possible) to share their perspectives on AI tools in the classroom — highly illuminating.

Common Challenges

Novelty effect: Students may initially engage only with the 'newness' of AI tools. Build in reflection to sustain purposeful engagement. | Unequal access to devices for student-facing AI use. Always have a non-digital alternative available.

WEEK 8 ASSIGNMENT: Interactive AI-Enhanced Lesson Design

Design a complete, ready-to-teach interactive lesson (minimum 45 minutes) using AI engagement tools. The lesson must include: (1) Clear learning objectives; (2) At least two AI-powered interactive activities; (3) A student reflection or thinking exercise that requires independent reasoning; (4) A note on how you will manage student AI use responsibly; (5) A 200-word reflection on the design choices you made and why. Aim to teach this lesson before Week 10 and share your observations at the Month 2 wrap-up.

🕒 Estimated Time: 80 minutes | Format: Lesson plan + digital activity files + reflection

6. Month 3 Curriculum

MONTH THREE

Mastery & Sustainability

Weeks 9 – 12

Month 3 elevates participants from skilled AI users to reflective leaders and advocates. The focus shifts to sustainability — how to embed AI meaningfully into professional practice for the long term, how to support colleagues and students, and how to navigate the institutional and ethical dimensions of school-wide AI integration. The program culminates in the Capstone Portfolio presentation.

Month 3 Learning Focus Areas

- Administrative efficiency: Reclaiming time through AI-assisted communication and documentation
- Equity and integrity: Developing and communicating responsible AI policies
- School culture: Leading AI change with colleagues, parents, and students
- Capstone: Demonstrating comprehensive mastery through an AI Integration Portfolio

Week	Title	Bloom's Level	Key Deliverable
Week 9	AI for Administrative Efficiency	Apply Analyze	AI-Assisted Professional Communication Portfolio
Week 10	AI Ethics, Equity, and Academic Integrity	Analyze Evaluate Create	Classroom AI Policy + Student AI Literacy Mini-Lesson
Week 11	Building an AI-Ready School Culture	Evaluate Create	AI Integration Action Plan
Week 12	Capstone Project and Future Planning	Evaluate Create (All Bloom's Levels Demonstrated)	CAPSTONE: Comprehensive AI Integration Portfolio

WEEK

9

AI for Administrative Efficiency

Duration	4 hours total
Delivery Mode	Synchronous workshop (2h) + Asynchronous practice (2h)
Bloom's Level	Apply Analyze

Month 3 opens with a focus on the administrative dimension of teaching — the invisible workload that consumes significant professional time. AI can dramatically reduce this burden, freeing teachers to invest more time in relationship-building, creative teaching, and professional growth. This week focuses on practical, immediately applicable AI techniques for communication, documentation, reporting, and professional organisation.

Learning Objectives

- Use AI to draft professional parent and stakeholder communications in a consistent, appropriate tone
- Generate high-quality, personalised report card comments using AI assistance and structured templates
- Use AI transcription and summarization tools to improve meeting efficiency and documentation
- Apply AI to professional development tasks: planning, research, and reflective writing
- Calculate and communicate the time savings from AI administrative assistance across a working week

Topics Covered

- The invisible teaching workload: Where teachers spend time outside the classroom
- AI for parent and guardian communication: Drafting, translating, and tone-checking messages
- AI for report writing: Generating comment banks, personalising comments, reviewing for bias
- AI for meeting management: Otter.ai and similar tools for transcription and action items
- AI for professional tasks: CPD planning, research summaries, and portfolio development
- AI for data analysis: Using AI to interpret student assessment data and identify patterns
- Professionalism and AI: When and how to disclose AI use in professional communications

Hands-On Activities

Activity 1: Communication Drafting Workshop

Participants use AI to draft three professional communications: (1) A parent newsletter about an upcoming unit; (2) A sensitive communication to a parent about a student concern; (3) A professional email to a colleague requesting curriculum collaboration. They compare the AI drafts, apply tone and appropriateness checks, and discuss what they would change and why.

🕒 Duration: 45 minutes | 🧑 Format: Individual + pair review

Activity 2: Report Comment Generation Lab

Using MagicSchool AI's report comment generator or a custom prompt, participants generate personalised report comments for three student profiles (provided as anonymised descriptions). They evaluate the comments for accuracy, personalisation, professionalism, and potential bias, then practise editing them to match their school's reporting tone and language.

🕒 Duration: 40 minutes | 🧑 Format: Individual + group discussion

Activity 3: Meeting Efficiency Audit

Participants review a sample meeting transcript (or bring their own) and use Otter.ai or Claude to generate a structured summary with key decisions, action items, and follow-up tasks. They then discuss how AI meeting tools can be introduced in their school and what protocols need to be established.

🕒 Duration: 30 minutes | 📄 Format: Small groups + recommendations

Resources & Tools

- ▶ **MagicSchool AI — Report Card Comment Generator** — Purpose-built AI for teacher report writing with tone controls
- ▶ **Otter.ai** — AI transcription and meeting summary tool for live or recorded meetings
- ▶ **Notion AI** — AI-enhanced note-taking, planning, and documentation tool
- ▶ **Microsoft Copilot for Education** — AI integration across Word, Outlook, Teams, and OneNote
- ▶ **Grammarly Business** — AI writing and tone assistant for professional communications

Trainer Tips

Use this week to calculate actual time savings: teachers who measure the impact are more likely to sustain adoption. | Stress the importance of human review before sending any AI-drafted communication, particularly sensitive parent messages. | Discuss institutional policies on AI use in professional documentation — some schools may have specific guidelines.

Common Challenges

AI report comments can feel generic. Teach participants to provide the AI with specific student behaviours and achievements for better personalisation. | Some teachers may feel uncomfortable with AI in professional communications. Normalise gradual adoption.

WEEK 9 ASSIGNMENT: AI-Assisted Professional Communication Portfolio

Create a small portfolio demonstrating AI-assisted professional communication. Include: (1) Three polished parent/stakeholder communications (different types/purposes), each accompanied by a note on what was AI-generated and what you edited; (2) Three personalised report card comments for different learner profiles; (3) A meeting action summary created with AI from a real or simulated meeting; (4) A 200-word reflection on how AI changed your administrative workflow this week.

🕒 Estimated Time: 75 minutes | 📄 Format: Digital portfolio document

WEEK

10

AI Ethics, Equity, and Academic Integrity

Duration	5 hours total
Delivery Mode	Synchronous seminar (3h) + Asynchronous task (2h)
Bloom's Level	Analyze Evaluate Create

This deep-dive week returns to ethics and equity with greater depth and institutional focus. Participants move from personal AI ethics (addressed in Week 4) to systemic considerations: How do schools develop responsible AI policies? How do teachers support students in developing genuine AI literacy? How are equity and access concerns addressed at a structural level? Participants leave this week with a policy document and a student-facing AI literacy lesson ready to teach.

Learning Objectives

- Develop a comprehensive classroom or school-level AI use policy addressing equity, access, and academic integrity
- Design and deliver a student-facing AI literacy mini-lesson appropriate to their learners' age and context
- Evaluate the equity implications of AI tool adoption in their specific school community (access, cost, language, cultural bias)
- Identify and apply strategies to support students who do not have equal access to AI tools outside school
- Lead a professional conversation with colleagues about responsible AI use in education

Topics Covered

- AI equity in education: The digital divide, language bias, and cultural representation in AI
- Institutional AI policy frameworks: What schools need to address (inspired by UNESCO, ISTE, and national guidelines)
- Student AI literacy curriculum: What students need to know and do with AI
- Academic integrity in the age of AI: Policy design, communication, and enforcement
- Supporting AI access equity: School-based strategies for levelling the playing field
- Communicating AI expectations to students, parents, and the wider school community
- Leading AI professional conversations with resistant or anxious colleagues

Hands-On Activities

Activity 1: Policy Design Workshop

Using a structured policy design template and examples from leading international schools and education departments, participants draft or significantly revise an AI use policy for their classroom or school. The policy must address: permitted uses, prohibited uses, equity provisions, student disclosure requirements, consequences, and a review mechanism. Policies are shared and critiqued in small groups.

🕒 Duration: 70 minutes | Format: Individual draft + group critique

Activity 2: Student AI Literacy Lesson Design

Participants design a 30-minute AI literacy mini-lesson for their students addressing: What is AI? How does it work (in age-appropriate terms)? How can we use it responsibly? What are its limitations? The lesson must include at least one hands-on activity. Groups share and give feedback on each other's designs.

🕒 Duration: 50 minutes | Format: Individual design + group feedback

Activity 3: Equity Audit

Using a provided Equity Audit Tool, participants audit their current or planned AI integration for equity considerations: Do all students have equal access? Does the tool work equitably for non-native English speakers? Are there cultural biases in the content? What is the cost, and who bears it? They complete the audit and draft two equity-enhancing recommendations.

🕒 Duration: 30 minutes | Format: Individual audit + pair discussion

Resources & Tools

- ▶ **TeachAI (teachai.org)** — Comprehensive K-12 AI guidance and policy design resources for schools
- ▶ **AI4K12 Initiative (ai4k12.org)** — Five big ideas in AI — free K-12 AI literacy curriculum
- ▶ **UNESCO AI Competency Framework for Students and Teachers (2024)** — Official global framework for AI literacy in education
- ▶ **Common Sense Media Digital Citizenship + AI Resources** — Age-levelled AI ethics and literacy resources for students
- ▶ **"Policy Considerations for Generative AI in Schools" — OECD (2023)**

Trainer Tips

Use real policy examples from different educational contexts (international, public, private, K-12) to show the range of approaches. | Student AI literacy lessons should be taught, not just designed. Encourage participants to actually deliver their mini-lesson before Week 12. | Acknowledge that schools are at very different places on AI policy. Meet participants where they are.

Common Challenges

Some participants may feel unable to influence school-level policy. Focus on classroom-level agency as a starting point. | AI equity conversations can feel abstract. Use local, concrete examples and data about student access in participants' own schools.

WEEK 10 ASSIGNMENT: Classroom AI Policy + Student AI Literacy Mini-Lesson

Submit two items: (1) A polished Classroom AI Policy document (500-800 words) that is ready to share with students, parents, and colleagues. It must address equity, academic integrity, and access; (2) A complete, ready-to-teach AI Literacy Mini-Lesson plan (30 minutes) for your students, including the activities, discussion questions, and key messages. Include a 250-word reflection on why these documents matter for your specific school community.

🕒 Estimated Time: 90 minutes | Format: Policy document + lesson plan + reflection

WEEK

11

Building an AI-Ready School Culture

Duration	4.5 hours total
Delivery Mode	Synchronous collaborative workshop (2.5h) + Asynchronous planning (2h)
Bloom's Level	Evaluate Create

This penultimate week zooms out from the individual classroom to the school community. Sustainable AI integration requires a school culture that is curious, collaborative, and critically informed — not one driven by anxiety or uncritical adoption. Participants develop strategies for building this culture, leading colleagues, engaging parents, and establishing professional learning communities that keep AI integration grounded in educational values.

Learning Objectives

- Identify the key conditions for a healthy, sustainable AI-positive school culture
- Develop a practical strategy for leading AI professional development with colleagues at different levels of AI readiness
- Design a plan for engaging parents and the community in conversations about AI in education
- Establish a professional learning community (PLC) focused on AI in education within their school or cohort
- Create a personal Continuing Professional Development (CPD) plan for staying current with AI in education

Topics Covered

- What does an AI-ready school culture look like? Key indicators and conditions
- Leading AI professional learning with colleagues: Meeting people where they are
- Establishing teacher AI learning communities: Structures, protocols, and sustainability
- Engaging parents and families: Communicating AI use transparently and building trust
- Advocacy and leadership: How teachers can influence school-level AI policy and decision-making
- Staying current in a rapidly changing landscape: Trusted sources, networks, and continuous learning strategies
- AI in education beyond the classroom: Admissions, safeguarding, student wellbeing, and school management

Hands-On Activities

Activity 1: School Culture Audit and Strategy Session

Using a provided School AI Culture Audit tool, participants assess their school's current readiness across five dimensions: awareness, policy, professional learning, student literacy, and parent/community engagement. They then identify the two most important areas for development and design a concrete 3-month strategy for improving them. Strategies are shared and refined in small groups.

🕒 Duration: 55 minutes | Format: Individual audit + group strategy

Activity 2: Colleague Onboarding Plan

Participants design a 3-session mini-professional development sequence for a colleague who is a complete AI beginner, an anxious resister, or an over-enthusiastic early adopter. They present their 'onboarding plan' to the group and receive feedback on tone, pacing, and content. The exercise builds coaching skills for peer AI leadership.

🕒 Duration: 50 minutes | Format: Individual design + trio presentations

Activity 3: PLC Formation and Planning

Participants form (or plan to form) a Professional Learning Community focused on AI in education. In cohort groups of 3-6, they establish: a meeting schedule, a shared focus question, a communication channel, and a set of norms for learning together. They create a first agenda for the PLC's inaugural meeting.

🕒 Duration: 35 minutes | Format: Self-selected groups

Resources & Tools

- ▶ **ISTE Standards for Educators — AI Edition (2024)** — Professional standards for educators in the AI era
- ▶ **TeachAI Educator Community (community.teachai.org)** — Global online community for educators working with AI
- ▶ **EdSurge AI in Education Newsletter** — Weekly curated news and resources on AI in education
- ▶ **Mindshift (KQED) — AI in Education Series** — Accessible, practical articles on AI and learning
- ▶ **"Building a Future-Ready School" — Tom Vander Ark (2023)** — Practical leadership guide for technology integration

Trainer Tips

Peer mentoring pairs formed this week should continue beyond the program — facilitate introductions intentionally. | Acknowledge the emotional dimension of leading change. Teachers who champion AI face scepticism and need support. | Provide participants with a curated list of trusted AI-in-education news sources to check weekly.

Common Challenges

Some participants may not have institutional support for AI integration. Focus on what they can control: their classroom and their PLN. | School culture change is slow. Set realistic expectations and celebrate small wins.

WEEK 11 ASSIGNMENT: AI Integration Action Plan

Create a comprehensive AI Integration Action Plan for your classroom and school context. The plan should include: (1) Current state assessment (audit findings); (2) Vision statement for AI integration in your context; (3) Three priority actions with timelines, resources needed, and success indicators; (4) A plan for engaging one colleague and one parent/community member in the AI integration journey; (5) Your personal CPD plan for the next 12 months (conferences, reading, communities); (6) Reflection on your 11-week learning journey so far. This plan will be presented as part of your Capstone.

🕒 Estimated Time: 80 minutes | Format: Action plan document (to become part of Capstone Portfolio)

WEEK
12

Capstone Project and Future Planning

Duration	6 hours total
Delivery Mode	Synchronous capstone presentations (4h) + Asynchronous portfolio finalisation (2h)
Bloom's Level	Evaluate Create (All Bloom's Levels Demonstrated)

The final week of the program is a celebration of 12 weeks of hard work, growth, and transformation. Participants present their Comprehensive AI Integration Portfolio to the cohort, receive and provide structured peer feedback, and reflect on their journey from Week 1 to Week 12. The week closes with a forward-looking planning session focused on sustaining and deepening AI integration in the year ahead — and with formal certification for all program completers.

Learning Objectives

- Present a comprehensive AI Integration Portfolio that demonstrates growth, critical thinking, and practical application across all three months
- Provide and receive constructive, evidence-based feedback on peer portfolios
- Articulate a clear, actionable vision for AI integration in their own professional practice over the next 12 months
- Identify two or three next-step professional development priorities in AI and education
- Celebrate the achievement of completing a rigorous, transformative CPD program

Topics Covered

- Capstone portfolio presentations: Format, timing, and peer feedback protocol
- Reflection on the 12-week journey: Key milestones, surprises, and transformations
- The field of AI in education: Where we are and where we are going
- Sustaining the learning: Habits, routines, and structures for ongoing growth
- Post-program resources: Communities, conferences, courses, and publications
- Certification and recognition: Celebrating and communicating professional achievement

Hands-On Activities

Activity 1: Capstone Portfolio Presentations

Each participant presents their AI Integration Portfolio to the cohort (10-12 minutes per person). Presentations are followed by 3-4 minutes of structured, appreciative peer feedback using the 'Glow and

Grow' protocol. The facilitator ensures every participant leaves with specific, actionable feedback and recognition of their achievements.

🕒 Duration: Variable (allow 15 min per participant) | Format: Individual presentation + peer feedback

Activity 2: Reflection Gallery Walk

Participants create a visual reflection artefact (digital poster, one-page infographic, or annotated portfolio cover page) summarising their three biggest learnings, one thing they will change in their practice immediately, and one goal for the year ahead. These are displayed in a virtual or physical gallery for all to view and comment on.

🕒 Duration: 40 minutes | Format: Individual creation + gallery walk

Activity 3: Future Planning Workshop and Celebration

In the final hour, participants set concrete next-step goals using a provided 12-Month AI CPD Planning Template. They identify one professional learning community to join, one conference or event to attend, one AI tool or concept they want to explore more deeply, and one colleague they will share their learning with. The session closes with a formal recognition ceremony and distribution of certificates.

🕒 Duration: 60 minutes | Format: Whole cohort, celebratory tone

Resources & Tools

- ▶ **ISTE Conference & Expo** — Leading global conference on technology and education — annual, with virtual options
- ▶ **AI in Education Summit (various regional editions)** — Dedicated AI in education conference with practitioner focus
- ▶ **Google for Education Certified Innovator Program** — Selective competitive program for education technology innovators
- ▶ **Coursera: AI for Everyone (Andrew Ng)** — Free, widely respected introduction to AI for non-technical professionals
- ▶ **MIT OpenCourseWare: Elements of AI** — Free, rigorous AI fundamentals course for educators wanting deeper understanding

Trainer Tips

Create a warm, celebratory atmosphere. This week is about recognition as much as learning. | Send a follow-up email after the program with all resources, the cohort contact list, and a 3-month check-in invitation. | If possible, invite a school leader to the capstone presentations — it validates teachers' professional investment.

Common Challenges

Some participants may feel their portfolio is not 'good enough'. Reassure them that growth matters more than perfection. | Virtual capstone sessions can feel less celebratory. Use breakout rooms, digital tools (Padlet, Mentimeter), and intentional celebration moments.

WEEK 12 ASSIGNMENT: CAPSTONE: Comprehensive AI Integration Portfolio

The Capstone Portfolio is the culminating assessment of the 12-week program. It must include the following sections: (1) Personal AI Learning Journey Narrative (500 words): How have your knowledge, skills, attitudes, and practice changed from Week 1 to Week 12? (2) Best Work Showcase: Select and annotate 5 artefacts from across the 12 weeks that best demonstrate your growth and capabilities; (3) AI Integration Action Plan (from Week 11, refined); (4) Classroom AI Policy and Student AI Literacy Lesson (from Week 10, finalised); (5) An AI-Enhanced Lesson or Unit (fully developed and annotated); (6) Future Professional Development Plan; (7) Appendix: Any additional artefacts, reflections, or resources that demonstrate your learning. Portfolios should be presented as a digital document, website, or PDF portfolio.

🕒 Estimated Time: 180 minutes (portfolio finalisation) | Format: Digital portfolio (PDF, website, or digital doc)

7. Curriculum Framework

The curriculum of this program is structured around five interconnected competency domains. Each domain develops progressively across the three months, and each weekly module makes contributions to one or more domains.

Competency Domain	Definition	Assessed Through
AI Literacy & Understanding	Foundational knowledge of AI concepts, types, capabilities, and limitations	Week 1 reflection, tool reviews, ethics analysis
AI Tool Proficiency	Practical ability to use AI tools effectively for educational purposes	Materials packs, lesson plans, assessment packages
AI-Enhanced Pedagogy	Integration of AI into sound pedagogical practice across the curriculum	Unit designs, differentiation plans, interactive lessons
Critical & Ethical AI Use	Ability to evaluate AI critically, identify bias, and apply ethical frameworks	Policy documents, bias labs, integrity case studies
Leadership & Sustainability	Capacity to lead AI integration in a school community and sustain practice	Action plans, PLC formation, capstone portfolio

7.1 Content Strand Map

Strand	M1 W1	M1 W2	M1 W3	M1 W4	M2 W5	M2 W6	M2 W7	M2 W8	M3 W9	M3 W10	M3 W11	M3 W12

8. Assessment Framework

Assessment in this CPD program is designed to be low-stakes, frequent, and developmental. The goal is not to judge but to guide — helping participants identify their growth edges and celebrate genuine progress. Assessment is structured across three modes:

8.1 Formative Assessment (Ongoing)

- Weekly reflection journal entries (private or shared at participant's discretion)
- Discussion forum posts and peer responses (at least one substantive thread per week)
- In-workshop activities completed with facilitator and peer feedback
- Short self-assessment check-ins at the start and end of each month

8.2 Summative Assessment (Weekly Assignments)

Each week includes one summative assignment that consolidates the week's learning into a practical artefact. These are assessed using a provided rubric and contribute to the final Capstone Portfolio. See individual week descriptions for details.

Week	Assignment Title	Assessment Mode	Portfolio Contribution
W1	AI Readiness Reflection	Written reflection	Yes — artefact selection
W2	AI Tool Review Report	Structured written report (template provided)	Yes — artefact selection
W3	AI-Assisted Unit Outline	Unit outline document	Yes — artefact selection
W4	Classroom AI Use Policy Document	Policy document (Word or PDF)	Yes — artefact selection
W5	Complete Teaching Materials Pack	Digital materials pack	Yes — artefact selection
W6	Differentiated Learning Unit Design	Digital unit plan	Yes — artefact selection
W7	Complete AI-Assisted Assessment Package	Assessment package document	Yes — artefact selection
W8	Interactive AI-Enhanced Lesson Design	Lesson plan	Yes — artefact selection
W9	AI-Assisted Professional Communication Portfolio	Digital portfolio document	Yes — artefact selection
W10	Classroom AI Policy + Student AI Literacy Mini-Lesson	Policy document	Yes — artefact selection
W11	AI Integration Action Plan	Action plan document (to become part of Capstone Portfolio)	Yes — artefact selection
W12	CAPSTONE: Comprehensive AI Integration Portfolio	Digital portfolio (PDF, website, or digital doc)	Yes — artefact selection

8.3 Capstone Portfolio Assessment

The Capstone Portfolio is assessed using a holistic rubric across five criteria:

Criterion	Description	Weighting
Depth of Learning	Evidence of genuine growth from foundational to advanced understanding over 12 weeks	25%
Quality of Artefacts	Selected artefacts demonstrate practical competence and pedagogical alignment	30%
Critical Reflection	Reflective writing shows depth, honesty, and evidence of changed practice	20%
Future Planning	Action plan is specific, realistic, and grounded in genuine institutional context	15%
Presentation	Portfolio is clearly organised, professional, and communicates effectively	10%

8.4 Completion Requirements

- Attend or make up at least 10 of 12 weekly sessions
- Submit all 12 weekly assignments (late submissions accepted with facilitator communication)
- Complete and present the Capstone Portfolio in Week 12
- Complete the post-program evaluation survey

Participants who meet all completion requirements receive a Certificate of Completion signed by the program designer.

9. Extended Hands-On Activities Bank

The following additional activities can be used to supplement weekly workshops, provide alternative tasks for participants needing challenge or support, or serve as standalone professional development sessions for teams that cannot commit to the full 12-week program.

Category A: AI Literacy Activities

- **AI Scavenger Hunt:** Find and document 10 examples of AI in everyday educational settings within one day
- **Technology Timeline:** Create a visual timeline of AI development from 1950 to today using AI tools
- **AI Debate:** Structured debate on 'AI will improve education more than any technology before it'
- **Documentary Analysis:** Watch and analyse a 20-minute AI education documentary clip using a provided analysis framework

Category B: Prompt Engineering Activities

- **Prompt Refinement Challenge:** Take one poor prompt and improve it through five iterations, documenting quality changes at each step
- **Subject-Specific Prompt Library:** Build a 20-prompt library for your subject area in one session
- **Negative Prompting:** Explore what happens when you tell AI what NOT to do or include
- **Role-Playing Prompts:** Experiment with asking AI to take on different professional roles (Socratic tutor, critical friend, exam marker)

Category C: Creative Materials Activities

- **Cross-Curricular AI Challenge:** Create materials that integrate two subject areas using AI assistance
- **Multilingual Materials Sprint:** Use AI to create materials in three different languages for one lesson
- **Audio Resource Creation:** Use ElevenLabs or similar to create an AI-voiced audio explanation of a key concept
- **Video Lesson Creation:** Use Synthesia or Loom with AI scripting to create a 3-minute explainer video

Category D: Assessment Innovation Activities

- **AI-Proof Assessment Design Workshop:** Re-design three existing assessments to require genuine human thinking
- **Peer Assessment AI Support:** Use AI to help students give better peer feedback with structured prompts

- **Data Analysis Practice:** Use AI to analyse a set of anonymised student performance data and identify patterns
- **Oral Assessment with AI Preparation:** Design an oral assessment protocol where AI helps students prepare but cannot replace their response

Category E: Leadership and Community Activities

- **AI Tool Showcase:** Facilitate a 30-minute showcase of AI tools for department colleagues
- **Parent Information Session Design:** Create and deliver a 20-minute parent information session on AI in your classroom
- **Student AI Ambassadors Program:** Design and pilot a student AI literacy ambassador program
- **Cross-School AI Learning Exchange:** Connect with a teacher from another school to share AI integration approaches and lessons

10. Common Challenges and Solutions

The following challenges are frequently encountered during AI professional development programs. Facilitators and participants are encouraged to use this section as a troubleshooting and planning resource.

Challenge	Why It Occurs	Recommended Solution
Teacher resistance to AI	Fear of job replacement, ethical concerns, previous negative technology experiences, or feeling behind colleagues	Begin with empowerment messaging. Share research on teachers who use AI vs. teachers who don't. Offer choice in tools. Acknowledge concerns as valid starting points.
Technology access barriers	School firewalls, lack of devices, cost of premium tools, or unreliable internet connectivity	Pre-test all tools before sessions. Have offline alternatives. Use free-tier platforms. Check IT permissions 2 weeks before each session. Provide a device-sharing protocol.
Over-reliance on AI output	Novelty, time pressure, and unfamiliarity with quality standards lead some teachers to accept AI output without critical review	Build mandatory review steps into every activity. Use quality checklists. Model the critical review process live. Celebrate teachers who find and fix AI errors.
AI hallucinations and inaccuracies	AI generates plausible-sounding but factually incorrect content, which teachers may not recognise in unfamiliar subject areas	Teach fact-checking as a standard step in every AI workflow. Use AI for structure and format; verify facts independently. Start with topics where participants have deep expertise.
Student misuse of AI	Students use AI to complete work for them, undermining learning and academic integrity	Address this proactively in Week 4 and Week 10. Redesign assessments (Week 7). Teach AI literacy explicitly. Focus on learning evidence that AI cannot fake: oral defence, in-class work, portfolio reflection.
Information overload	The AI landscape changes weekly, and participants can feel unable to keep up with new tools, research, and policies	Curate, don't aggregate. Provide a short weekly newsletter with 3-5 most important updates. Focus on principles over tools — the principles transfer when tools change. Normalise not knowing everything.
Equity concerns about AI access	Not all students or teachers have equal access to AI tools outside school, creating potential for AI use to widen rather than close gaps	Audit access in Week 10. Design AI activities that can be completed on school devices during school time. Avoid assigning AI homework for students without home access. Advocate for school-provided AI access.
Institutional reluctance	School leaders or governing bodies may be cautious, resistant, or uninformed about AI in education	Provide evidence of AI integration benefits from credible sources. Start small and document impact. Share student and teacher perspectives. Invite leaders to capstone presentations.
Privacy and data security fears	Teachers worry about student data being used by AI companies, shared, or misused	Address this directly in Week 4. Provide a simple decision framework: Never input identifiable student data into consumer AI. Use school-approved platforms. Read the privacy policy of every tool before use.

Keeping up with rapid change	AI capabilities, tools, and policies change faster than any professional development program can address	Build habit of weekly checking 1-2 trusted sources (EdSurge, TeachAI, ISTE). Establish a PLC for ongoing learning. Emphasise adaptable principles over specific tool expertise. Frame uncertainty as part of the profession.
------------------------------	--	--

11. Tips and Best Practices

The following tips are drawn from instructional design best practice and from the collective wisdom of educators who have engaged in AI professional development programs. They are organised by role and area of focus.

11.1 Tips for Facilitators

For Program Facilitators

- Start every session by acknowledging the rapid pace of change in AI — normalise uncertainty and model a learning stance
- Always test tools yourself before the session. Have a backup plan for when tools are slow, unavailable, or blocked
- Use the AI tools yourself, live, during demonstrations — imperfections are excellent teachable moments
- Vary session formats: solo exploration, paired tasks, group discussion, and whole-cohort sharing all serve different learning goals
- Collect and share real artefacts from the cohort (with permission) as exemplars — peer examples are often more influential than facilitator-created ones
- Build in buffer time: AI activities take longer than anticipated when teachers get absorbed in exploration
- Follow up every synchronous session with a concise written summary — audio/visual learners may miss details
- Establish explicit norms for discussing AI anxieties and disagreements in the first session — psychological safety is non-negotiable

11.2 Tips for Prompt Engineering

Writing Effective AI Prompts

- Be a Director, not a Requester: Instead of 'Write a lesson plan', try 'Act as a curriculum designer and create a Year 8 Biology lesson plan on cell division for a mixed-ability class of 28 students, aligned to the National Curriculum. Include a starter activity, main explanation, two differentiated tasks, and an exit ticket.'
- Front-load your context: Put the most important information at the beginning of your prompt — AI attends more to early context
- Specify the format explicitly: 'Respond in a table with columns for [X], [Y], [Z]' saves significant editing time
- Use negative instructions: 'Do not include...' is as important as 'Include...' for quality control
- Iterate rather than start over: Refine with follow-up prompts: 'Make the language simpler', 'Add more examples', 'Rewrite for a Year 5 student'

- Assign a persona: 'As an experienced ESL teacher' or 'As a GCSE examiner' shifts the AI's output register significantly
- Ask AI to explain its reasoning: 'Explain why you structured the lesson this way' produces useful metacognitive insight
- Use the 3-Draft Rule: Always generate 3 versions of anything important and select the best elements from each

11.3 Tips for AI-Enhanced Lesson Planning

Making AI Lesson Planning Work

- Use AI for structure, not soul: AI drafts the skeleton; your teacher expertise, knowledge of your students, and subject passion add the life
- Start with your learning objectives, not the topic: A prompt beginning with 'My learning objectives are...' produces far more pedagogically-aligned content
- Always personalise: Add 3-5 specific facts about your class before generating. AI doesn't know your students — you do
- Use AI for the parts you dislike: If you hate writing differentiation activities, let AI draft them. If you hate creating worksheets, start there
- Time your AI planning: Compare how long AI-assisted planning takes versus your usual process. The time savings are motivating
- Keep a Lessons Learned log: Note when AI planning saved time and when it created more work than it saved

11.4 Tips for Assessment Design with AI

AI-Assisted Assessment Best Practices

- Specify your Bloom's level explicitly in your prompt: 'Create 5 questions at the Analysis level of Bloom's Taxonomy' improves cognitive alignment dramatically
- Always add subject-specific vocabulary to your prompt: AI generates better questions when you provide the key terms
- Use AI rubric generators as a starting draft only: Always review for alignment with your curriculum language and grading culture
- Design at least one AI-resistant task per unit: Oral presentations, in-class observations, practical demonstrations, and personalised portfolios require genuine human thinking
- Be cautious with AI grading: Use AI for feedback drafts, not final grades. AI cannot understand context, nuance, or growth trajectory
- When generating feedback with AI: Provide the rubric, the student response, and at least 2 specific things the student did well before asking for feedback

11.5 General Best Practices for Teachers Using AI

- Maintain the human in the loop: Review every piece of AI-generated content before using it with students. You are professionally responsible for everything you distribute
- Disclose appropriately: Be transparent with students, parents, and colleagues about when and how you use AI in your practice
- Invest in your prompt skills: 10 minutes learning to write better prompts saves hours of editing AI output
- Embrace imperfection: AI tools are imperfect and rapidly changing. Good enough and improved is better than perfect and unused
- Stay subject-specific: Seek out AI guidance for your specific subject area — the applications and challenges differ significantly
- Connect with peers: The most valuable AI learning happens in conversation with colleagues who are trying the same things
- Document your journey: Keep notes on what works, what doesn't, and what your students respond to. You are building institutional knowledge
- Take breaks from AI: Some tasks genuinely benefit from entirely human thinking. Develop judgment about when AI helps and when it hinders

12. Useful Resources

The following resources are curated, educator-tested, and regularly updated. They are organised by category to support different aspects of AI integration in education.

12.1 Essential AI Tools for Educators

Tool	Category	Best For	Cost
MagicSchool AI (magicschool.ai)	All-in-one educator AI	Lesson plans, rubrics, reports, differentiation, IEPs	Free / Premium
ChatGPT (chatgpt.com)	General language AI	Lesson planning, materials drafting, research assistance	Free / Plus
Claude (claude.ai)	General language AI	Long documents, nuanced writing, research analysis	Free / Pro
Google Gemini (gemini.google.com)	General language AI	Google Workspace integration, research, drafting	Free / Advanced
Canva AI (canva.com)	Visual design	Presentations, infographics, worksheets, visual content	Free / Pro
Diffit (diffit.me)	Text adaptation	Differentiating reading materials, ELL support	Free / Premium
Curipod (curipod.com)	Interactive lessons	Engaging AI-generated interactive slides and activities	Free / Pro
Khanmigo (khanacademy.org)	Student AI tutor	Personalised tutoring, Socratic questioning, student support	Free (USA) / Fee
Nearpod (nearpod.com)	Student engagement	Interactive lessons, real-time responses, formative checks	Free / Plus
Otter.ai (otter.ai)	Transcription	Meeting notes, lecture transcripts, parent call summaries	Free / Pro
Eduaide.ai	Lesson planning	Comprehensive lesson and activity design with curriculum alignment	Free / Premium
Brisk Teaching (briskteaching.com)	Chrome extension	AI assistance within Google Workspace — slides, docs, forms	Free / Premium

12.2 Essential Readings and Research

- **Holmes, W., Bialik, M., & Fadel, C. (2019). Artificial Intelligence in Education: Promises and Implications for Teaching and Learning. Center for Curriculum Redesign.**
- **Luckin, R. (2018). Machine Learning and Human Intelligence: The Future of Education for the 21st Century. UCL IOE Press.**
- **UNESCO (2021). Recommendation on the Ethics of Artificial Intelligence. UNESCO Publications.**

- **UNESCO (2023). Guidance for Generative AI in Education and Research. UNESCO Publications.**
- **OECD (2023). OECD Policy Considerations for Generative AI in Education. OECD Education Policy Perspectives.**
- **Long, D. & Magerko, B. (2020). What is AI Literacy? Competencies and Design Considerations. CHI Conference Proceedings.**
- **Mishra, P. & Koehler, M. J. (2006). Technological Pedagogical Content Knowledge: A Framework for Teacher Knowledge. Teachers College Record, 108(6), 1017–1054.**
- **Mollick, E. & Mollick, L. (2023). Assigning AI: Seven Approaches for Students with Prompts. SSRN Working Paper.**

12.3 Professional Communities and Organisations

- **ISTE (iste.org) — International Society for Technology in Education: Standards, conferences, and professional development**
- **TeachAI (teachai.org) — Policy guidance and educator community for AI in K-12 schools**
- **AI4K12 (ai4k12.org) — Five Big Ideas in AI: Free K-12 curriculum and teacher professional development**
- **Educator AI (edai.community) — Teacher community for sharing AI integration experiences**
- **Future of Education Technology Conference (FETC) — Annual conference with strong AI programming**

12.4 Newsletters and Ongoing Learning

- **EdSurge (edsurge.com) — Weekly education technology news with strong AI coverage**
- **Mindshift (kqed.org/mindshift) — KQED education blog with evidence-based AI in learning articles**
- **AI in Education Newsletter (Ben Williamson, Edinburgh) — Academic perspective on AI in education policy**
- **The Rundown AI (therundown.ai) — Daily AI news digest — useful for staying current quickly**
- **Matt Miller's Ditch That Textbook (ditchthattextbook.com) — Practical AI integration ideas for classroom teachers**

12.5 Free Online Courses

- **Elements of AI (elementsofai.com) — University of Helsinki: Free AI fundamentals, highly accessible**
- **AI for Everyone (Coursera / Andrew Ng) — Free audit available: Non-technical AI overview for professionals**
- **Generative AI for Educators (Google Cloud) — Free, short course on generative AI for classroom application**
- **Teaching with AI (OpenAI) — Free guidance and resources on classroom AI integration**
- **Microsoft Learn — AI in Education Learning Path — Free, self-paced modules for educators**

Appendix A: Glossary of AI Terms for Educators

Term	Definition
Artificial Intelligence (AI)	A field of computer science focused on creating systems that can perform tasks that typically require human intelligence, such as language understanding, image recognition, and decision-making
Machine Learning (ML)	A subset of AI in which systems improve their performance on tasks through experience and exposure to data, rather than through explicit programming
Large Language Model (LLM)	An AI system trained on vast quantities of text that can generate, summarise, translate, and analyse human language. Examples include GPT-4, Claude, and Gemini
Generative AI	AI systems that can generate new content — text, images, audio, video, code — in response to prompts. The most educationally relevant form of AI currently
Prompt	The input a user provides to an AI system to guide its output. Effective prompt design is a key skill for AI-using educators
Prompt Engineering	The practice of crafting and refining prompts to consistently produce high-quality, relevant outputs from AI systems
Hallucination	When an AI system generates confidently stated but factually incorrect information. All educators must verify AI factual claims independently
Bias	Systematic patterns in AI outputs that reflect prejudices, stereotypes, or imbalances present in the training data or algorithm design
Training Data	The large dataset on which an AI model was trained. The composition of training data significantly shapes what an AI system can and cannot do
TPACK	Technological Pedagogical Content Knowledge — the intersection of technology knowledge, pedagogical knowledge, and subject content knowledge required for effective technology integration
Adaptive Learning	Educational approaches that use AI to adjust the content, pace, or support level of learning based on individual student performance data
Natural Language Processing (NLP)	The branch of AI that enables computers to understand, interpret, and generate human language. The foundation of tools like ChatGPT and Claude
Algorithm	A set of rules or instructions that a computer program follows to complete a task. AI systems use complex, learned algorithms to produce outputs
Data Privacy (GDPR/FERPA)	Legal frameworks protecting personal data. GDPR (EU) and FERPA (US) both have implications for how educators can use AI tools that process student information
AI Literacy	The set of competencies needed to understand, critically evaluate, and effectively use AI systems — increasingly important for both teachers and students

Appendix B: Prompt Engineering Templates for Educators

The following templates are ready to use. Replace the [BRACKETED] elements with your specific details. Each template uses the RACE framework: Role, Action, Context, Expectation.

Lesson Planning Prompts

Lesson Plan Template

Act as an experienced [SUBJECT] teacher for [GRADE LEVEL]. Create a complete lesson plan on [TOPIC]. The class has [NUMBER] students aged [AGE], including [SPECIFIC NEEDS if any]. The lesson should last [DURATION] and align with [CURRICULUM STANDARD]. Include: a warm-up activity (5 min), direct instruction segment (10-15 min), two student activities (differentiated for support and challenge), formative assessment/exit ticket, and homework options. Use engaging, age-appropriate language.

Unit Planning Template

You are a curriculum designer. Create a [DURATION]-week unit outline for [SUBJECT], [GRADE LEVEL], on the topic of [TOPIC]. For each lesson provide: a title, the main learning objective (using Bloom's Taxonomy level [LEVEL]), key activities, and assessment strategy. Ensure the unit builds progressively from foundational understanding to application and evaluation. Include opportunities for differentiation throughout.

Materials Creation Prompts

Worksheet Generation Template

Create a worksheet for [SUBJECT], [GRADE LEVEL] students on [TOPIC]. Include: (1) A brief explanation of the key concept (3-5 sentences); (2) 5 knowledge-check questions; (3) 3 application questions; (4) 1 extended thinking/evaluation question; (5) A creative task option. Vocabulary should be appropriate for [GRADE LEVEL]. Include a clear instructions section at the top.

Differentiation Template

I have a [GRADE LEVEL] reading/worksheet on [TOPIC]. Rewrite it for three levels: (1) Support version: Simplify sentence structures, reduce vocabulary complexity, add a glossary of 5 key terms, and break tasks into smaller steps; (2) Standard version: Keep as is but check for clarity and engagement; (3) Extension version: Add depth, require higher-order thinking, include application to real-world or unfamiliar contexts.

Assessment Design Prompts

Quiz Generation Template

Create a [NUMBER]-question quiz on [TOPIC] for [GRADE LEVEL] [SUBJECT] students. Include:

[NUMBER] multiple choice questions (with plausible distractors), [NUMBER] short answer questions, and [NUMBER] extended response questions. Target [BLOOM'S LEVEL] thinking. Use vocabulary appropriate to [GRADE LEVEL]. Include an answer key with marking guidance.

Rubric Design Template

Create a detailed assessment rubric for the following task: [TASK DESCRIPTION]. The rubric should have [NUMBER] criteria. For each criterion, provide descriptors at four performance levels: Excellent (4), Proficient (3), Developing (2), and Beginning (1). Use clear, observable, student-friendly language. The rubric should assess [SUBJECT] [GRADE LEVEL] skills in [TOPIC AREA].

Feedback Generation Prompts

Student Feedback Template

You are an experienced [SUBJECT] teacher providing written feedback on a student's [ASSESSMENT TYPE]. The marking rubric is: [INSERT RUBRIC CRITERIA]. The student's work demonstrates the following: [INSERT SPECIFIC OBSERVATIONS FROM THE WORK]. Write 3-4 sentences of personalised, constructive feedback that: (1) Acknowledges one specific strength; (2) Identifies the most important area for improvement; (3) Provides a specific, actionable next step; (4) Is encouraging and professional in tone.
